

 **Growing your general dental practice with digital technology.**

You're invited to join Dr Knox Kim at this full day dentist masterclass to hear his planning tips for successful Invisalign[®] treatment outcomes in his practice. Dr Kim will discuss Invisalign patient selection, giving guidelines on what cases are ideal for treatment within the general dental practice and when to refer.

Dr Kim will share his learnings and experience for setting up ClinCheck[®] plans including his tips on anchorage considerations for your Invisalign treatment plans for predictable and successful clinical outcomes.

This masterclass will also provide you with feedback on the Align Technology SmartForce[®] features and attachments, how to review these in your ClinCheck treatment plan and the role they play in the treatment outcome.

Attendees will participate in an interactive ClinCheck software component which allows doctors to have one of their own ClinCheck plans reviewed with feedback given live during this session.

There will also be a case based review of troubleshooting tips and techniques to help ensure that you and your patients have an optimal Invisalign experience from initial records through to treatment completion.
